

XYZ Solutions outsources testing for their finance app due to resource constraints. The Value Stream Mapping (VSM) identifies wastes like overproduction, waiting, and defects, prolonging the 13-day lead time. Lean strategies are employed to address these, including streamlined requirements gathering, concurrent test case development, and immediate defect resolution. The updated VSM shows lead time reduced to 8 days by eliminating wastes. Focusing on essential features, parallel development, and prompt defect resolution optimizes efficiency. These improvements enable XYZ Solutions to enhance productivity and meet tight deadlines effectively.
